2. Read about Kenneth Blake. Complete sentences 1-6 with words from the text.

Kenneth Blake: Furniture Designer

I decided to use plastic because it's durable. You can make it in a lot of colours and it's easy to mass-produce plastic items.

I went to the local garden centre to examine the chairs other companies made, the rival products, and to find out their cost - about €20. I bought three different models. I wanted a chair without arms so I cut the arms off

one. This made the back too weak so I added vertical supports to make the back stronger. I sketched my designs on paper, and from these I produced technical drawings with all the dimensions. I made a full-scale model to make sure the chair looked good and was comfortable. Then I transferred my drawings to a 3-D computer modeling program, and sent a copy by file transfer to the moulding company. They made a mould and sent me a prototype chair. I added more supports to the back and the chair was ready to produce.

Some people call it the *Batcane*. The cane transmits ultrasound signals. These are reflected by objects _____. Sensors on the cane receive the reflected signals which are passed to a microprocessor.

There are four buttons on the handle of the cane - the two _____ are on the top, and the two which are for objects on the left and right are on the back. These buttons vibrate when an object is detected. The larger the object, the larger the vibration.

C. Hydroforming is a way of shaping materials such as aluminium or ultralight steel. The metal is pushed into shape using fluid pressure. For example, to produce components for car bodies, steel tubes are placed inside a mould and high pressure applied in the tube which pushes the metal into the exact shape required. Hydroforming a component in this way means that several different operations such as stamping and welding are no longer required.

Hydroforming is used where there is demand for lower weight with high strength. It is used in the manufacture of top-of-the-range sports cars and motorbikes, such as Harley Davidsons. It is also used in the aerospace industry to produce panels for aircraft.

Общий балл по промежуточной аттестации суммируется с баллами, полученными обучающимся по результатам текущего контроля успеваемости в течение семестра; сумма баллов переводится в оценку по 100-балльной и дихотомической шкале следующим образом :

Соответствие 100-балльной и дихотомической шкал

Сумма баллов по 100-балльной шкале	Оценка по дихотомической шкале
